

Priefert HORSE WALKERS

prieferthorsewalkers.com

THE WORLDS MOST ADVANCED HORSE WALKERS

A well-conditioned horse performs better, behaves better, and is less prone to injury. With today's busy schedules, keeping horses fit can be a challenge, and hiring someone who is properly trained to assist you can be expensive and risky. That's why a good horse walker is the safest, most affordable, and practical solution. Hundreds of the top equine professionals around the world and in every equine discipline choose our walkers because the only thing more reliable than a Priefert Walker is the company that stands behind it.

Panel Walkers	4-Horse	6-Horse w/50	6-Horse w/70	8-Horse
Outer Round Pen	42'	50'	70'	70'
Arm Length	20'	25'	35'	35'
Space Between Divider Panels	25.17'	22.50'	32.75'	24.71'
Inner Round Pen Diameter	23.95'	33.74'	54.13'	54.13'
Outer Round Pen Diameter	40.73'	51.24'	71.64'	71.64'

CONTROL BOX OPTIONS

Touch Screen*	15-30-60 min.	Forward-Reverse	Digital in MPH	On & Off

*Number of Programmable Routines: 20 @ 12 Steps Per Routine

PANEL WALKER ROUND PEN OPTIONS

Round Pens	Height	Length	Height of Sheeting	Gauge
Horizontal Rails	6'	8'	20"	16
Wire Mesh	6'	8'	20"	16 GA Rails 4 GA Wire

PANEL WALKERS

Available in 4, 6, or 8 horse configurations, the Priefert Panel Walker eliminates the need to tie your horses to the walker, so they are able to move about more freely and naturally. Panel walkers “push” the horse instead of “pulling” it, and to ensure that you don’t overwork your horse in one direction, Priefert walkers are easily reversible for balanced conditioning.

Serious “Horse Power”

Priefert walkers operate using a reliable Siemens 3 horsepower motor, which has the strength, speed, and torque to withstand 2000 pounds of downward pull while conditioning up to eight horses at once.

Planetary Gearbox

Priefert Walkers run on a planetary gear box system similar to those used in heavy earth moving equipment like track hoes. This provides years of virtually maintenance free, reliable operation.

Divider Panels

Low impedance, electrically charged, free swinging divider panels encourage horses that have a tendency to lag behind to keep pace. Each divider panel is made of heavy-duty 2”x2” 4 gauge wire mesh, and the electrical charge is optionally activated at the control box.

Weatherproof Finish

Every Priefert Walker is powder coated in our in-house facility using a durable architectural grade powder coat finish which will extend the life and beauty of your purchase for years to come. This electrostatically applied, baked-on finish is resistant to weather, rust, and chipping.

Variable Speed & Direction

Priefert walkers offer a variable speed adjustment, giving users the option to match the walker session to the needs of individual horses. To ensure that horses are not overworked in one direction, Priefert walkers are fully reversible to provide even conditioning.

Emergency Shutoff

Safety for horse and handler is always a top priority, which is why Priefert walkers feature an emergency shutoff at the control box should users need to quickly stop their walker for any reason.

Save Time & Money

When you consider the value of your own time, the cost and risk of hiring someone to keep your horses conditioned, and the health and performance benefits for your horses, a Priefert panel walker is a wise and practical investment, offering a maximum return on investment.

Whisper Quiet Operation

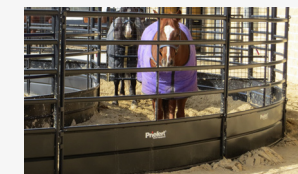

With an audible output of only 60 decibels, all Priefert Walkers are whisper quiet. Our seventy foot diameter, eight horse walker produces less noise than your household clothes dryer, meaning that operating noise is never a distraction.

PANEL WALKER OPTIONS

Push Button or Touch Screen Controlbox

Each option is contained in a weather-resistant metal housing featuring a UV laminate to protect against the effects of the sun. Both boxes include a wireless remote control, and can be customized by speed, direction, and

Horizontal Rail or Wire Filled Panels

Each curved panel is a full 6’ tall and made of heavy-duty 16 gauge quadraform tubing. Solid bottom sheeting along the bottom keeps the dirt in the track. Users can select panels with horizontal rail or with 2”x2” heavy-duty, 4 ga

ADD-ON ACCESSORIES

The optional sprinkler system enhances the drag’s effectiveness and helps maintain an ideal moisture level to reduce dust and achieve an optimal footing consistency. Simply attach any outdoor water hose to the walker’s sprinkler hookup and you are ready to go.

The optional round pen drag is engineered to be light enough to easily move around by hand, but strong enough to maintain the path of the walker. The dual side drag has the ability to move dirt from inside to out or outside in, while leveling the ground on every rotation. ***Never use drag with horses in the round pen**

The optional control box pedestal is designed to house either control box option. Installation requires a concrete anchor bolt kit, allowing the pedestal to be placed next to the horse walker or in a separate location depending on the owner’s preference.

LEAD WALKERS

NO BELTS TO BURN

Priefert's Lead Walker sets the standard for features, ease of use, and durability. With a snap of a halter and a push of a button, your horses are ready to be conditioned. From innovative safety features to its virtually maintenance-free planetary gearbox, no other lead walker on the market can offer you the quality and value that you will find with Priefert. The Priefert Lead Walker is perfect for warming up, cooling down, or rehabilitating horses and is available in 4, 6, or 8 horse configurations. Priefert Lead Walkers offer owners the option to upgrade their until to a Panel Walker if desired.

SAFETY FIRST

Each walker arm features a quick release cable with a spring-loaded pin connector attachment point. This allows for a fast and secure connection point for putting horses on the walker, while also providing the safety of a emergency release point should it be needed.

PREMIUM ROUND PENS

Priefert round pen panels are designed to create a perfect circle for the walker to operate within. Each curved panel is a full 6' tall and made of heavy-duty 16 gauge quadraform tubing. Solid bottom sheeting along the bottom keeps the dirt in the track. Users can select panels with horizontal rail or with 2"x2" heavy-duty, 4 gauge wire mesh tops. The panels are connected using secure, horse-safe pin connections that place the connection point of the side of the panel away from the walking path. The walker round pen gate also includes a sheeted bottom and features a safety stop to prevent the gate from swinging into the walking path. Following assembly, the round pens are staked into place to prevent them from moving.
